

Client Success Stories

ABHI Accelerates Digital Transformation Through an API-First Core Banking Platform

ABHI Microfinance Bank successfully went live on AutoSoft's microservices-based, API-first core banking platform during Q2. With more than 200 APIs, the platform strengthens ABHI's digital ecosystem by enabling faster integration with digital channels, fintech partners and third-party services. This flexible foundation helps the bank accelerate innovation, scale new offerings and respond more quickly to evolving customer needs.

The milestone demonstrates the power of an API-first architecture: reusable services can connect systems more efficiently, shorten time to market and support an increasingly connected digital banking experience without compromising operational continuity, resilience or security.

PPCBL Moves Forward with Digital Lending Transformation

Punjab Provincial Cooperative Bank Limited is progressing with AutoSoft's Loan Origination and Digital Onboarding solution. The programme is designed to digitize the lending journey from onboarding and assessment through approval, disbursement and collections. By automating key activities and strengthening risk controls, the solution will help reduce manual effort, improve processing consistency and create a smoother borrowing experience.

Product Upgrades

Release 4.0.3 brings targeted improvements across trade finance, treasury, credit, payments and human resources. Each enhancement is designed to strengthen control, reduce manual effort and create a more consistent user experience.

[Available in release 4.0.3](#)

• Trade Services Upgrade Supports PSW Requirements:

What changed: The TRADE Services application has been upgraded to align with Pakistan Single Window requirements.

Client value: Streamlined and digitized processing supports faster, more consistent export operations.

Next: Additional deployments are planned for Q3 to extend these capabilities to more institutions.

• ADAMS Strengthens Control Over Nostro Settlement Instructions:

What changed: Treasury users can now manage Nostro Settlement Instructions through parameter-level updates.

Client value: A comprehensive audit trail preserves previous values, effective timestamps and user actions, giving treasury teams clearer oversight and stronger control.

• Credit Automates Running Finance Subsidy Calculations:

What changed: The Running Finance product now supports SBP subsidy mechanisms for both conventional and Islamic banking models.

Client value: Automated markup or profit calculations and subsidy allocation reduce manual processing while supporting more consistent regulatory treatment.

• Delivery Channel Integration Advances Real-Time Raast Payments:

Status: Core banking API integration for Raast has been initiated for First Women Bank's digital channels.

Expected value: The integration is intended to support real-time incoming and outgoing payments, improve transaction efficiency and strengthen the customer experience.

• AutoHRM Delivers a Modern Browser-Based Experience:

What changed: The browser-based AutoHRM upgrade has been deployed.

Client value: Employees and HR teams gain a more accessible interface and a more consistent experience across core HR processes.

Next: Rollout to additional institutions and further feature enhancements are planned for Q3.
